### 1.LISTING KODE

```
<?php
```

```
class PersegiPanjang {
    public $panjang;
    public $lebar;
    public function __construct($p, $l) {
        $this->panjang = $p;
        $this->lebar = $l;
    }

    public function hitungLuas() {
        return $this->panjang * $this->lebar;
    }

    public function hitungKeliling() {
        return 2 * ($this->panjang + $this->lebar);
    }
}

class Lingkaran {
    public $jariJari;
```

```

public function __construct($r) {
    $this->jariJari = $r;
}

public function hitungLuas() {
    return pi() * pow($this->jariJari, 2);
}

public function hitungKeliling() {
    return 2 * pi() * $this->jariJari;
}
}

class Trapezium {
    public $alasAtas;
    public $alasBawah;
    public $tinggi;
    public $sisiMiring;
    public function __construct($a, $b, $t, $s) {
        $this->alasAtas = $a;
        $this->alasBawah = $b;
        $this->tinggi = $t;
        $this->sisiMiring = $s;
    }

    public function hitungLuas() {
        return 0.5 * ($this->alasAtas + $this->alasBawah) * $this->tinggi;
    }
}

```

```

    }

    public function hitungKeliling() {
        return $this->alasAtas + $this->alasBawah + (2 * $this->sisiMiring);
    }
}
